

# NAVIGATING PRODUCTION CHALLENGES

## CABINET DELAYS AMID HIGH DEMAND

The entire cabinet building industry is grappling with heightened demands on production, which leads to extended delivery timeframes of several weeks more than is typical.

## AUTO SUPPLY CHAIN STRUGGLE

Supply chain challenges for specific materials are equal to the struggles faced by various industries, such as the recent issues affecting car manufacturers.

## QUALITY REMAINS OUR TOP PRIORITY

Holland's prioritizes the quality of materials and craftsmanship in our cabinets and manufacturing process. We won't compromise on these aspects simply to get your job done faster.

### WHAT WE'RE DOING ABOUT IT

We've implemented strategic measures to mitigate delays:

#### ADVANCED MANUFACTURING TECH

Our cutting-edge facility and technologies enhance efficiency in both design and manufacturing processes.

#### OPTIMAL STAFFING LEVELS

Our workforce is strategically staffed to ensure maximum production capacity and output.

#### CRITICAL VENDOR RELATIONS

We prioritize access to materials, parts, and services through vital global vendor relationships.

## STAYING THE COURSE

Please be mindful that working with another cabinet maker would likely result in an additional 2-3 weeks to restart your project with them, further delaying project completion. We'd hate to see that happen and remind you that all other cabinet manufacturers are facing the same issues and are not likely to be as well prepared as Hollands is to deliver for you despite promises made to the contrary.
